2010-2011 MY

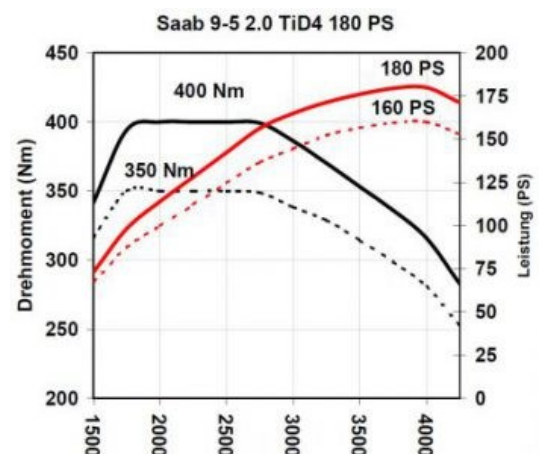

180HP/400Nm Performance upgrade  
2.0Tid4 270004200

The enormous development and testing effort invested by Hirsch Performance in diesel engine calibration is delivering results.

The high torque of 400Nm is available from remarkably low rpm's. The harmonious power delivery and wide rpm band provide larger reserves when overtaking and markedly improved performance for the 2.0TiD with variable geometry turbocharger.

The fuel consumption remains very low, and the emissions are Euro 5 – certified.

Extensive testing in test benches and on the road ensure the high quality and durability that is expected of a Hirsch Performance product.
