2010-2011 MY

260HP/400Nm Performance upgrade

2.0T FWD 270004000

2.0T XWD 270004010

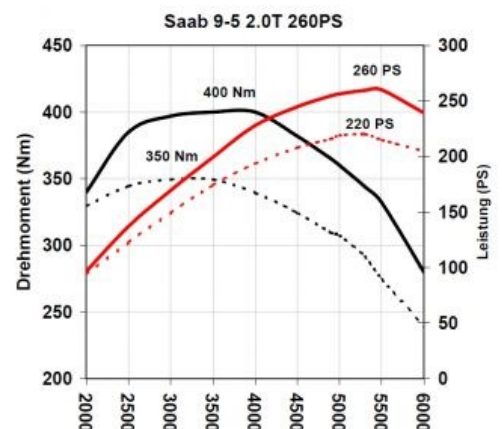

For the second generation Saab 9-5, the reliable 2-litre engine has been developed further, and equipped with direct injection and a modern twin scroll turbocharger.

Perfect conditions for a performance upgrade!

With improved charge cooling and direct injection, more power and torque than before can be generated; 260hp and 400Nm, and thanks to the twin scroll technology, the throttle response is significantly faster.

Built for the Autobahn

With the performance upgrade from Hirsch Performance, the maximum power is not only available for short bursts of acceleration, but can be maintained, just like the top speed of 155 mph for hours at a time.
